

PERSONAL

Software Engineer with data science proficiency, experienced in building data-driven, end-to-end systems. Skilled in Python workflows, structured backend logic, and lightweight frontend development. Known for analytical thinking, strong problem-solving, attention to detail, and fast self-learning. Collaborative and reliable, focused on delivering clear and consistent system behavior.

WORK
EXPERIENCE**Software Engineer****Freelancer • 2024 – Present**

- Translated client requirements into end-to-end workflows, combining Python backend logic with simple, functional frontend components.
- Improved system accuracy by analyzing incorrect outputs and restructuring order-management data processes.
- Developed structured data models and validation rules to ensure reliable, consistent operational behavior.
- Collaborated closely with the client, presenting findings clearly and guiding decisions through concise communication.

SOFTWARE
PROJECT**AI Powered Natural Language SQL Query Interface**

- Developed a Python-based system that converts natural language instructions into SQL queries using retrieval methods such as RAG with light use of JavaScript for interface logic.
- Added backend verification layers to validate query structure, logic, and result quality.
- Containerized the application with Docker to enable reliable deployment and predictable runtime behavior.

EDUCATION

Sami Shamoon College of Engineering**AI Implementers in Organizations • 2026**

- Architected modular AI solutions using Vibe Engineering and strict guardrails.
- Engineered advanced Multi-Agent systems and enterprise automation workflows.
- Deployed scalable AI applications applying Security by Design and Human-in-the-Loop.

Code Master**Practical Software Development Program • 2025**

- Learning modern technologies, practical coding skills, and industry-relevant tools.

Sami Shamoon College of Engineering, Be'er Sheva**B.Sc. in Software Engineering, Major in Data Science • 2019 – 2023**

- Focused on data processing, pattern recognition, and AI-based modeling.
- Gained hands-on experience with large-scale data extraction and analysis.
- Enhanced problem-solving skills through hands-on projects and algorithmic challenges.
- Applied core computer science principles including OOP, algorithms, and data structures.

SKILLS

Development & Data: Python, FastAPI, SQL, NoSQL.

Tools & Cloud: Docker, CI/CD, Linux, AWS, Git.

MILITARY

Israeli Defense Forces Combat Medic • 2012 – 2015

- Delivered medical care in high-pressure, mission-critical environments.
- Followed strict protocols while adapting to rapidly changing field conditions.
- Demonstrated discipline, fast learning, and resilience under extreme stress.
